

About squint surgery in children

K\Uni]g'U'gei]bl8

The squint may be present all or only some of the time. It may be in one eye only, both or may alternate between the two eyes.

When your child is diagnosed with a squint, glasses or patching may be necessary. Sometimes surgery is needed.

Not all squints need an operation but a squint should always be treated, as:

your child will not grow out of the squint

if left, the sight will get worse in the affected eye.

Pain relief

Any pain is usually relieved by giving paracetemol eg Calpol or ibuprofen. Remember do not give more than the stated dose and do not give medicine containing aspirin to children under 16 years of age.

Eye drops

Eye drops will be prescribed to help keep the eye clean and to prevent infection. Before you go home, the nurse will show you how to give the drops and we will give you an information leaflet on this.

Cleaning the eyes

Do not touch the eyes but remove the secretions around the eye using boiled cooled water and the sterile gauze provided. If a sticky yellow or green discharge appears, contact the At your two week follow up appointment, the orthoptist will let you know whether your child is ready to do these activities again.

What to do if you are concerned

Each day after the surgery, the eye(s) should be less sticky, less gritty and look less red. It

should become more red, more sticky or more painful after the surgery, then this may be a sign that there is a problem. If this happe 322411 and we will arrange to review your child.

Squint surgery is only a stage in treatment and not the end of treatment. Although the squint may appear much improved after surgery, it is important to keep regular follow up appointments as further orthoptic treatment may be necessary.

Before leaving the Day Surgery Unit, you will be given a two week follow up appointment with the orthoptist and the ophthalmologist.
